Very well written report. Headings and subheadings are usually recommended but this report is very easy to read through regardless. Name on report?

Very good understanding of chosen topic, showing an awareness of the use of these prototypes. I find it interesting that you talk about the second prototype as high fidelity, I would still call it low fidelity in the sense that whilst you can interact with it, it's still wireframe and doesn't allow user input, other than clicking. However, very good points are made. Great tie-in with own project, very good reflection on prototypes and what you complete in your own design. You even mention things that were not done that you'd consider changing (e.g. not conducting interviews from the start of the project).
